Subject: Gold King Mine Spill Articles

Hello all – See the third story below from this morning's CPR broadcast.

Quick summary: The local watershed group said that EPA has been a partner in the past but if we had consulted them prior to the work at the Gold King Mine, the release could have been prevented. They did say that we have been a good partner in the past but that we have not been as good of late. He did admit to knowing about the work in advance of EPA's work at the mine site. However, when he was asked about why the community did not want the watershed or mines to be part of a Superfund site he said there is no way to know if the Silverthorne community had agreed to be a Superfund site that this release would or would not have happened. EPA did not comment on this story.

The rest are for your files. – Rebecca
